

## Unable to perform DNS requests over TCP in Shared network

- Parallels Desktop for Mac Standard Edition
- Parallels Desktop for Mac Pro Edition
- Parallels Desktop for Mac Business Edition

### Symptoms

DNS requests are rejected when performing the query over TCP in Shared network mode in Windows virtual machine.

### Cause

DNS requests over TCP in Shared network feature is supported only in Parallels Desktop Pro and Business Editions.

Such functionality is not supported in Parallels Desktop Standard Edition.

### Resolution

For Parallels Desktop Standard Edition please apply one of the following workarounds:

1. Change the network type from **Shared** to **Bridged** by going to Windows virtual machine's configuration > **Hardware** > **Network** > **Source**.
  2. Assign DNS server manually in Windows network settings.
