

How to change default RDP Port for Session Host in RAS Farm

- Parallels Remote Application Server

Information

1. Change RDP port in Windows registry on particular RD Session Host:

- Start Registry Editor.
- Locate and then click the following registry subkey:
 - **HKEY_LOCAL_MACHINE\System\CurrentControlSet\Control\Terminal Server\WinStations\RDP-Tcp\PortNumber**
- On the **Edit** menu, click **Modify**, and then click **Decimal**.
- Type the new port number, and then click **OK**.
- Quit Registry Editor.
- Restart the computer.

Please check original Microsoft reference

2. Adjust Port in *Remote Application Server Console > Farm > RD Session Hosts > right-click Agent > Properties:*

3. In *Server Properties* window click *Edit Defaults > Default Server Properties* window will be opened > Adjust *Port* value accordingly.

*NOTE: If **Inherit Default Settings** option is disabled, then **RDP port** can be adjusted right away for only one particular **RD Session Host**.*
