

How to move PMM database to a new SQL Server

- Parallels Device Management

Information

NOTE: Take a backup before you proceed with instructions below:

1. Stop the **Parallels Configuration Manager Proxy** service.
 2. Move **SQL Instance** to new location including **CM_xxx** and **PMM_xxx** databases. Save permissions to these databases.
 3. Complete the configuration of SCCM (SCCM must work with new instance of SQL Server)
 4. Start **Parallels Configuration Manager Proxy service** - it will find the new location of SQL Server using SCCM's data and shall work properly.
