

Installing Parallels Client on HP Thin Pro OS

- Parallels Remote Application Server

Information

This article describes how to install Parallels Client on a machine that works under HP Thin Pro OS

Download and Installation process

1. Download the Parallels Client for Linux (64-bit) Debian package from the website:

<https://www.parallels.com/products/ras/download/client/>

2. Switch to **Administrator** mode from the system menu (bottom left icon)

3. Go to **Start** menu > **Tools** > **X Terminal**

4. Unlock the file system for read/write access:

```
# fsunlock
```

5. Enable installation of packages.

6. Update the list of packages:

```
# apt-get update
```

7. Change to the download directory:

```
# cd /home/user/Downloads
```

8. Install RAS Client:

```
# dpkg -i RASClient.deb
```

9. Install missing dependencies:

```
# apt-get install -f
```

10. Revert the file system to read-only access:

```
# fslock
```

11. Close the terminal window and revert back to User mode from the system menu.

Create a shortcut for the RAS Client

1. Right-click on the Desktop and select **Create > Other > Custom**.

2. A new icon called "**Custom**" will be created on the Desktop, right click on it and select "**Edit**".

3. Set the following:

- **Name** - "RAS Client"
- **Enter command to run** "/opt/2X/Client/scripts/rasclient-hp-thinpro.sh".

4. Now you can open Parallels Client from **Start** menu:
