

dsconfigad: command not found

- Parallels Device Management

Symptoms

Mac can't be joined to domain during OSD Task Sequence.

pmm_tswizard.log:

```
/Applications/Utilities/Parallels OSD Task Sequence
Wizard.app/Contents/Resources/../../Resources/scripts/join_domain.sh: line 214:
dsconfigad: command not found
join_domain: An error occurred while trying to bind this computer to AD
join_domain: Next attempt in 10 seconds...
/Applications/Utilities/Parallels OSD Task Sequence
Wizard.app/Contents/Resources/../../Resources/scripts/join_domain.sh: line 207:
dsconfigad: command not found
/Applications/Utilities/Parallels OSD Task Sequence
Wizard.app/Contents/Resources/../../Resources/scr
01-15 16:42:21.209 D /TsExecutor:440:307/ Step 'Join Domain' failed (Script
join_domain.sh failed (exit code: 1, status: 0))
01-15 16:42:21.209 D /TsExecutor:440:307/ Child step 'Join Domain' failed
```

Cause

Apply OS X Image step failed or was skipped:

```
01-15 16:40:50.381 D /TsExecutor:440:307/ Child step 'Format and Partition
Disk' skipped
01-15 16:40:50.381 I /TsExecutor:440:307/ Child step 'Apply OS X Image' is
disabled
01-15 16:40:50.381 D /TsExecutor:440:307/ Progress: 22%
01-15 16:40:50.412 D /TsExecutor:440:307/ Child step 'Apply OS X Image'
skipped
```

Resolution

Join Domain step in OSD Task Sequences must be executed only after applying OS X image.
