

Install button for deployed application or Task Sequence is greyed out

- Parallels Device Management

Symptoms

Install button for deployed application or Task Sequence is greyed out:

Cause

The item was deployed without option **Allow users to run the program independently of assignments**.

Resolution

Open properties of the deployment, switch to User Experience tab and enable the option **Allow users to run the program independently of assignments**:

Once Mac processes the updated policy, **Install** button will become active:
