How can I confirm the status of an update installed via PMM locally on the Mac?

- Parallels Device Management

Information

How can I confirm the status of an update installed via PMM locally on the Mac?

Resolution

For High Sierra and newer, execute the following command in **Terminal**:

```
softwareupdate --history
```

For older versions of macOS, please use this command:

```
cat /Library/Receipts/InstallHistory.plist
```

If the update is present in the output of that commands, it was installed successfully, otherwise, it wasn't.
