

How to deploy Parallels Desktop with automatic allowing of the Kernel Extension via Parallels Mac Management for SCCM

- Parallels Mac Management 8.1

Information

How to deploy **Parallels Desktop** with automatic allowing of the **Kernel Extension**?

1. Install **Parallels MDM server** in your environment and enroll Macs to it;
2. Make sure that users have approved the MDM profile that was pushed to their Macs;
3. Prepare **Parallels Desktop** deployment package: <https://kb.parallels.com/en/120093>
4. Create a new **OS X Task Sequence**:

5. Add **Kernel Extensions** step to the Task Sequence and specify **Allowed Team ID 4C6364ACXT**:

6. Add **Install Package** step, specify the proper **Package** and **Program**:

7. Deploy the **Task Sequence** to the desired **Device Collection**. The **Kernel Extension** will be allowed automatically, and then **Parallels Desktop** will be installed.
