

The minimum supported version of MS Windows must be installed

- Parallels Device Management

Symptoms

NetBoot server can't be installed on Windows 10 Distribution Point:

Cause

PMM NetBoot requires the **Distribution Point** to have **Windows Deployment Services** installed, and Windows 10 can't have it.

Resolution

Please use Windows Server that is a PXE service point and has **WDS** installed and running

trademarks or registered trademarks of their respective owners.
