

What happens when PMM license expires

- Parallels Device Management

Information

When **Parallels Mac Management for SCCM** license expires, it has the following consequences:

- License status in SCCM Console is **Expired**;
 - **Problem Monitor** in system tray displays error **Parallels Mac Management for Microsoft SCCM license has expired**;
 - **Problem Monitor** doesn't show new reports from Macs;
 - Attempts to enroll new Mac clients fail;
 - **Network Discovery** and **AD System Discovery** do not enroll new Mac clients;
 - Push installation of Mac client fails;
 - Already installed Mac clients do not receive policies. If users try to receive policies manually (clicking on **Connect** in the client interface), an error **Failed to establish connection to the SCCM Proxy. Forbidden** is displayed.
In other cases, error messages aren't shown to users;
 - PMM-related commands in SCCM Console context menu don't work;
 - Macs can't be enrolled to **DEP**;
 - Task Sequences aren't available in **NetBoot / USB Boot**.
