

How to partly change RAS Policies and apply only to specific users

• Parallels Remote Application Server

Symptoms

There is a default policy configured in **Parallels Remote Application Server Console > Policies**.

Some users would like to have an experience that implies a different configuration of the same settings in the default policy.

Use Case Example

A user would prefer a remote browser to open links when the link is clicked in a published application like Microsoft Outlook,

instead of a local browser.

The default policy is configured to **Redirect URLs to the client device**:

Resolution Create a new policy by duplicating the existing default policy: That will create another policy with the same name and number in brackets like Policy (1) in this example. After that, open properties for the new policy and remove the existing Users and Groups leaving only those that should have some policies altered:
