

Remote printing with Parallels Access

- Parallels Access for Business
- Parallels Access

Question

I would like to print remotely while connected via Parallels Access to a remote computer. How to do that?

Information

While connected to a remote machine via Parallels Access you can easily print using your favorite application by sharing the necessary file using Parallels Access **File Sharing** feature.

Printing from a remote computer on your host computer

If you want to print something from a remote computer on your host computer, do the following:

1. Save the file you want to print on the remote computer as PDF or any other file type supported on your host computer.
2. Share the file using **File Sharing** feature from the remote computer.
3. Once you click the **Share** button, the corresponding link to download the file on your host computer will be automatically added to the **Remote Clipboard**. Visit [KB123039](#) to learn more about Remote Clipboard feature.

4. Download the file using the link from the **Remote Clipboard** window and print it.

Printing from your host computer on a remote computer

To print on your host computer from a remote computer you just need to add your host computer to Parallels Access if it's not done already.

1. [Add your host computer to Parallels Access](#)

2. Share the file using **File Sharing** feature from your host computer.
3. After you click the **Share** button, Parallels Access will notify you that the link to download the file has been added to the clipboard

4. Paste the link to the **Remote Clipboard** window.

5. Download the file on the remote computer using any web browser by pasting the link to the address bar.
 6. Print the file after the download process is finished.
