

## **Updates and deprecations?in Parallels Remote Application Server version 18.0**

- Parallels Remote Application Server 18.0

### **Minimum Operating System Requirements and Supported Components**

With the release of version 18, Parallels Remote Application Server (RAS) will be updating its minimum operating system requirements and deprecating certain components and features.

#### **Parallels RAS Components:**

- Parallels Publishing Agents and Secure Client Gateways will be supported on Windows Server 2008 R2 and above.

#### **Changes in the Parallels RAS PowerShell Cmdlets:**

- Renaming of PowerShell module from PSAdmin to RASAdmin.
- Adding the "RAS" prefix to cmdlet names – Old command names will be supported as aliases for backward compatibility.

#### **Parallels RAS VDI Components**

- Parallels VDI Agent will be supported on Windows Server 2008 R2. Microsoft Hyper-V, as a VDI provider, will be supported on Windows Server 2012 R2 and above.

The following VDI components will no longer be supported:

- Standalone VDI Agent Appliance
- Citrix Hypervisor as a VDI provider
- QEmu KVM with Libvirt as a VDI provider

#### **Application Containerization**

- Removal of built-in Turbo.net public repository integration.

#### **Parallels Client**

- Parallels Client for Android will be supported on Android 5.0 and above.
