# How to update PMM Agent if the installer can't be downloaded from Distribution Points?

- Parallels Device Management

## Information

How to update PMM Agent if its installer can't be downloaded from Distribution Points?

Please create a **Task Sequence** having a single step **Execute Script** and specify this script there. Don't forget to replace **%YOUR_PMM_PROXY_URL_HERE%** with you PMM Proxy URL.

Then deploy this Task Sequence to the desired Device Collection (**All Mac OS X Systems** by default) as **Required**. Macs will download the PMM Agent installer from PMM Proxy directly and update their PMM Agents.
