

Restricting Access by Parallels Client Type and Build Number

- Parallels Remote Application Server

Information

If you'd like to restrict access to the farm by Parallels Client type and/or build number, please do the following:

1. Go to **RAS Console** → **Connection** → **Allowed Devices** and change the mode to **Allow only the selected clients to connect to the system** or **Allow only the selected clients to list the published items** depending on your needs:

2. Disable checkboxes for the clients you want to prevent from connecting on any conditions:

3. Specify the minimum build for others. For example, if you'd like to allow connections with Parallels Client for Windows not older than **17.1.1.21792** you need to set the value to the last group of digits in the build – **21792** in this case:

4. Click **Apply**.

Now users running the outdated clients will get this message on connection attempts:
