

Extended Client Methods for SAML Authentication

- Parallels Remote Application Server 19.1

Since RAS v18, Parallels Clients may now initiate a connection to a RAS Farm via SAML.

How to use

1. To allow this, make sure that **Web (SAML)** authentication method is allowed at RAS Console > **Connection > Authentication** tab.

2. At Parallels Client, create the connection that points to the associated HTML5 Theme and select **Web** as the authentication method:

3. Upon connection Parallels Client will either open built-in browser or use the system's default one where you may authenticate at IdP:

4. Once done, applications that are available for your account will be listed at Parallels Client:
