Automatic memory assignment in Parallels Desktop for Chrome OS Enterprise and Education Edition

- Parallels Desktop for Chrome OS Enterprise and Education Edition

Question

A new virtual machine created in Parallels Desktop for Chrome OS Enterprise and Education Edition was only assigned 2 GB of RAM. What are the rules for automatic RAM assignment, and how can I make manual adjustments?

Information

In order to ensure a good balance between a virtual machine and host performance, Parallels Desktop for Chrome OS Enterprise and Education Edition assigns virtual machine RAM based on total host RAM in the following way:

Host RAM	Virtual machine RAM
4GB	2GB
8GB	3GB
16GB	4GB

Note: assignment rules may differ if you are running Chrome OS 86 and below.

To manually adjust the virtual machine memory assignment, please refer to KB 125347.
