

Issues and Limitations in Parallels Mac Management for SCCM version 8.6

- Parallels Device Management

Issues and Limitations in Parallels Mac Management for SCCM version 8.6.

With the release of version 8.6 Parallels Mac Management for SCCM will be deprecating or limiting certain features for specific platforms:

- Operating System cannot be captured from a Mac running macOS 11 Big Sur.
- macOS 11 Big Sur cannot be deployed neither using USB Boot, nor NetBoot.
- User configuration profiles will not be deployed to Macs running macOS 11 Big Sur. This will be fixed in the upcoming updates of PMM.
