How to allow only one copy of the published app to start in the environment

- Parallels Remote Application Server

Information

How to allow only one copy of the published app to start in the environment?

Resolution

1. Please go to RAS Console Publishing, locate the application in question, and open its License tab;

2. Enable option **Allow users to start only one instance of the application**:

If you want to use this setting by default, please click **Site Defaults...** and enable the same option:

Once you apply the changes, all applications inheriting the default settings will have this option enabled:
