Upgrading multi-tenant environment

- Parallels Remote Application Server

The following information should be taken into account when it comes to upgrading Multi-Tenant infrastructure:

1. RAS Tenant Broker supports Tenants up to 2 major versions older than the Tenant Broker;

2. Tenant Broker should always be upgraded first and then tenants can be upgraded separately, each during it's own maintenance window.

3. Use a referenced upgrade procedure with known issue for RAS v18.0 release.
