

How to install applications in virtual machines if they fail to install from shared folders

- Parallels Desktop for Mac App Store Edition
- Parallels Desktop for Mac Pro Edition
- Parallels Desktop for Chrome OS Enterprise and Education Edition
- Parallels Desktop for Mac Business Edition
- Parallels Desktop for Mac Standard Edition

Symptoms

I cannot install an application from a shared folder (for shared folders on Chromebook please refer to this article).

Cause

Some applications require installation from local folder of Windows.

Windows sees shared folders as network ones, as a result applications with this requirement fail to install.

To check if you have Shared folders enabled, please check the options according to screenshots below.

For Mac:

Open virtual machine <u>configuration</u> > Options > Sharing. If option **Share Mac user folders with Windows** is checked, Shared folders are enabled. You can manage them by clicking **Configure...** and selecting the folders you'd like to share (Desktop/Documents, etc).

For Chromebook:	
Click the Shared Folders icon in the top right corner of the Windows window and selec	t Manage shared folders
chek the onared rotates from in the top right corner of the windows window and serec	t Wanage shared roucis.
