

Add local network printer in Window on Parallels Desktop for Chrome OS Enterprise and Education Edition

- Parallels Desktop for Chrome OS Enterprise and Education Edition

Question

How do I add a local network printer in Window on Parallels Desktop for Chrome OS Enterprise and Education Edition?

Information

Since Windows running in Parallels Desktop for Chrome OS Enterprise and Education Edition does have access to the Chromebook's local network, adding a network printer works exactly like it does on a physical Windows machine. See [KB4886](#) for detailed instruction.
