

File transfer control

- Parallels Remote Application Server 19.1
- Parallels Remote Application Server 18.3

Parallels RAS version 18.1 introduces an option for granular control of file transfer for HTML5 and Chrome clients.

In order to configure it, go to RAS Console-> Farm-> select RDSH or any other resource you need-> Go to Properties-> Agent settings-> Highlight 'Allow file transfer command'-> Click 'Configure' button.

From the opened menu there is an option to configure file transfer direction(from Server to Client, vise versa or both).

From the same menu there is an option to specify default download location and an option to restrict to change it.
