

## Unable to select Virtual network for AVD template

- Parallels Remote Application Server

### Symptom

It's not possible to select **Virtual network** and **Subnet** when deploying AVD template. Both menus are grayed out:

### Cause

A wrong **Location** for the **Template Source** has been selected on the previous step:

The **Location** of the **Template Source** must match the **Location** of **Virtual Network**.

## Resolution

Please select the right **Location** for the **Template Source**.

It should be the same as for the **Virtual Network**.
