

Install Linux virtual machine on a Mac with Apple M-Series chip

- Parallels Desktop for Mac App Store Edition
- Parallels Desktop for Mac Standard Edition
- Parallels Desktop for Mac Pro Edition

To install a distribution of Linux ARM, use a bootable ISO installation image, but make sure that it is an **ARM-based image**. See the [list of supported distributions](#).

In Parallels Desktop, you can also download a set of ready-to-go Linux virtual machines from the main Installation Assistant menu:
