

Parallels Access Security Updates

- Parallels Access for Business
- Parallels Access

Like any software development company, Parallels does not disclose, confirm or discuss security vulnerabilities until they are fixed, and the fix has been released to the public.

If you believe you have found a security issue in Parallels Access, visit KB 125214.

Get the latest Parallels Access update

To maintain your Parallels Desktop product's security, we recommend installing all available product updates. To learn how to check for updates, visit <u>KB 123848</u>.

Importance of installing macOS security updates

To keep your computer safe, after installing the latest Parallels Access build we also strongly recommend installing all macOS security updates. Parallels Access depends on the security of macOS, as it runs on a Mac under control from macOS. For your convenience, you can even <u>automate macOS updates</u> or perform them <u>manually</u>.

Importance of installing Windows security updates

To keep your computer safe, after installing the latest Parallels Access build we also strongly recommend installing all Windows security updates. Parallels Access depends on the security of Windows, as it runs on it under control of Windows OS. To keep Windows safe, install all Windows updates including security fixes. Check this article to learn how to update it.

Parallels Access security updates
