

Is it possible to use a redirected microphone or camera?

- Parallels Secure Workspace

Resolution

It is currently not possible to redirect a microphone or camera to use within an application session.

Parallels Secure Workspace is a browser application with no client agent installed. Technical limitations make it impossible to stream this input to a remote session. Furthermore, audio and video is not really performant over RDP. It will create a lot of unnecessary overhead.

To make video and audio calls, it's advised to use the video conferencing clients (Microsoft Teams, Skype, Zoom, ...) directly on the end user's device.

Looking for a more unified workspace and Microsoft Teams integration?

Consider publishing MS Teams as a web application.
