

Access-Based Enumeration (ABE) prevents file listing in Awingu

- Parallels Secure Workspace

Symptoms

Some files/folders are not listed in Parallels Secure Workspace (as a drive).

Cause

When **Access-Based Enumeration** is enabled in the Microsoft Windows Server to control user access to files and folders, it's possible some files/folders are not listed in Parallels Secure Workspace (as a drive).

These NTFS and share permissions are required to make sure folders/files can be listed:

- List Folder / Read Data
- Read Attributes
- Read Extended Attributes
- Read Permissions
