

The touch keyboard appears every time when tapping in a RemoteApp / RDS App

- Parallels Secure Workspace

Symptoms

The touch keyboard appears every time when tapping in a RemoteApp / RDS App.

Cause

A streamed application is considered as a text field for Windows.

Resolution

You can change a setting in Microsoft Windows to explicitly enable or disable the touch keyboard with the keyboard button on the task bar (only if you are not in tablet mode).

1. In Microsoft Windows, navigate to **Settings > Devices > Typing**.
2. Find the setting "Show the touch keyboard when not in tablet mode and there's no keyboard attached": set this to "off".
