

Enabling front-end logging in the Workspace (keyboard and copy-paste)

- Parallels Secure Workspace

Resolution

1. Open the **Developer** tools of the Internet browser.
Be careful to not perform this procedure in a browser that is already open in the remote desktop session. It's best to click in the Workspace's navigation pane first (so the active application session does not have focus).
In most Internet browsers on Windows, press **[F12]** to open the developer tools.
2. Navigate to the **Console** tab.

Enter the instruction below and confirm by pressing **[Enter]**.

Enabling the clipboard log:

```
svGlobal.clipboardLog = true
```

Enabling the keyboard log:

```
svGlobal.keyboardLog = true
```

The contents of the console tab can usually be saved by right-clicking in the console and choosing the proper action.
