

Adding an entry to the Microsoft Windows hosts file

- Parallels Secure Workspace

Resolution

1. Open NotePad as an administrator.
How-to: search for NotePad and right-click to run as Administrator.
2. Go to **File > Open** and select **C:\windows\system32\drivers\etc\hosts**
3. At the bottom of the file, add a host entry by specifying an IP address and host; for example:
`192.168.1.1 example.awingu.com`
4. Click on **File > Save** to confirm the changes.

Mind that it may require to restart the Internet browser to take effect.
