

<u>Does Parallels Secure Workspace use the RD Gateway</u> (<u>Microsoft Windows Server</u>)?

• Parallels Secure Workspace

Resolution

Parallels Secure Workspace does not make use of the RD Gateway of a Microsoft Windows RDS infrastructure and does not support connecting through the Microsoft Windows RD Gateway.

So for this purpose, it's not a requirement to install this role on a Microsoft Windows Server.

Instead, Parallels Secure Workspace connects directly to either the RD Session Host or the RD Connection Broker.
