

Configuring the maximum number of licensed users per Workspace domain

- Parallels Secure Workspace

Symptoms

How to configure a maximum number of licensed users per Workspace domain.

Resolution

Administrators can configure this setting for each Workspace domain by navigating to **System Settings > Global > Domains** and selecting the Workspace domain.

Then, scroll to the **Max licensed users** section.

Max Licensed Users: If enabled, you can configure the maximum number of concurrent or named (depending on the license) users that are allowed to be logged in to this domain. When set to 0, domain users can't access the domain anymore. This setting does not limit the number of application sessions. This means a user can still open multiple application sessions.
