

## **Missing sound in Red Hat Enterprise Linux on Mac computers with M-Series chips**

- Parallels Desktop for Mac Business Edition
- Parallels Desktop for Mac Standard Edition
- Parallels Desktop for Mac Pro Edition
- Parallels Desktop for Mac App Store Edition

Some of you might have already noticed there is a known issue with missing sound in Red Hat Enterprise Linux virtual machines on Mac computers with Apple M-Series chips.

The culprit of this issue is caused by the sound subsystem missing in the distributives because the availability of the native desktop Arm hardware is limited.

As a workaround, you can configure [PipeWire](#) to setup network streaming.
