

Fix low network upload speed in Windows 11 in Parallels Desktop

- Parallels Desktop for Mac Standard Edition
- Parallels Desktop for Mac Business Edition
- Parallels Desktop for Mac Pro Edition
- Parallels Desktop for Mac App Store Edition

This article will help you when you experience an immensely low network connection within a Windows 11 virtual machine.

Resolution

The way around the issue has been added to the Parallels Desktop 18.3.0 build. Right-click the Parallels Desktop icon in Dock > **Check for updates...** to update Parallels Desktop to the latest version.

If you're not willing to update Parallels Desktop to Parallels Desktop 18.3.0 and newer version, feel free to apply the workaround below:

1. Start Windows 11 virtual machine > Open **Device Manager**.
2. Expand **Network adapters**, right-click **Parallels VirtIO Ethernet Adapter**, click **Properties** > **Advanced**.

3. Set the value of the **Offload.Tx.LSO** to **Disabled**. Click OK.

Note: it may be required to do this on every Parallels Desktop upgrade until the fix lands on one of the Parallels Desktop releases.
