

Is downgrading supported?

- Parallels Secure Workspace

Resolution

Downgrading is not supported.

Please carefully consider the reasons for downgrading.

Keep in mind:

- Some product changes are done to enhance security (e.g. newer security standards, deprecating older ones).
- Downgrading also means you may not have the most up-to-date security patches applied. We do not provide security patches for older versions.
- Also, keep in mind the [Product End-of-Maintenance and Support Policy](#) .

If you still want to go back to an older version:

- Restore a backup of each node of the Parallels Secure Workspace environment (and external database, if applicable). More info: [Backup and restore strategies](#) .
 - Or grab a copy of an older version and start from scratch. More info: [Download appliance](#) .
-
