

Fix Crashing Issues in Age of Empires II running in Parallels Desktop

- Parallels Desktop for Mac Business Edition
- Parallels Desktop for Mac Standard Edition
- Parallels Desktop for Mac App Store Edition
- Parallels Desktop for Mac Pro Edition

Age of Empires II is a popular real-time strategy game that has captured the hearts of gamers worldwide that requires specific hardware to run smoothly.

If you are running the game on Parallels Desktop with Windows 11 as a virtual machine (VM) on Mac computers with Apple Silicon, it's crucial to ensure that your setup meets the <u>minimum requirements</u>.

As per the system requirements for the game, it needs 4 GB of RAM to run smoothly. Since Windows will use <u>up</u> to half of the assigned system memory (RAM) for graphics when required, we advise you to allocate 8 GB of RAM to your Windows 11 VM, addressing potential crashing issues caused by insufficient resources allocated to the Windows 11 virtual machine.

To manually change a virtual machine's memory, follow the steps below:

1. Shut down your virtual machine (from the menu bar, select Actions :

- 2. Open the virtual machine's <u>configuration</u> > **Hardware** > **CPU & Memory** > **Manual**.
- 3. Set the required amount of **RAM** to **8 GB** by selecting it in the drop-down menu:

memory to 7168 M cally, this solution		ever, since Window	ws manages the memory
