

Hide license info for Service Providers

- Parallels Remote Application Server 19.3

Applicable when using Tenant Broker (based on the Tenant Broker configuration for existing or new tenants) and also standard where license information is not shown for non-root

This article illustrates the ability to hide license information to Tenant farms for non-root admins.

Based on the Tenant Broker configuration for existing or new tenants, and also standard where license information is not shown for non-root-admin.

Previously, both root admins and non-root admins could see license information.

In **19.3.24503**, only root admins could have access to view license information.

In order to enable this functionality, below are the actions to run on the **Tenant Broker**.

First, we need to generate a HashKey on the **Tenant Broker**:

- On Tenant Broker > Farm > Tenants > Tasks > Add (**if new Tenant**) OR right click the target Tenant > Properties > Tenant Properties configurator will open.
- Check "Do not show billing information" OR copy the Hashkey to run on **Tenant Broker** via Powershell.

RASTenant1 Properties

Enable Tenant

Name:

Public domain addresses: ▼

Clients in gateway mode connect to published tenant resources by server IP

Do not show billing information

Description:

Connection Broker:

Tenant invitation hash: 

PowerShell:

Open Powershell on **Tenant Broker**.

1. Import-Module RASAdmin
2. New-RASSession -Server "tenant.company.com"
3. Invoke-RASTenantBroker -HashKey <string> -Join <SwitchParameter> [-HideLicenseInfo <bool>] [-PublicDomainAddresses <string>] [-SiteId <uint>] [-TenantBroker <string>] [-TenantName <string>] [<CommonParameters>]

Example of how cmdlet in step 3 should look:

- Invoke-RASTenantBroker -Join -Hashkey "..." -Tenantbroker "..." -hidelicenceinfo \$true

Here is how it should look like after license information is hidden:

ROOT ADMIN

Name	Value
License Type	Parallels Remote Application Server SPLA
License Key	*****_*****_*****_*****-B7MAQJ
