

Does Parallels Desktop Business Edition support Windows Autopilot?

- Parallels Desktop for Mac Business Edition

Parallels Desktop Business Edition is a powerful virtualization software solution that allows IT administrators to run Windows and other operating systems on Mac computers seamlessly. Windows Autopilot is one of the solutions to deploy Windows available in the industry today. Does Parallels Desktop support it to deploy Windows 11 virtual machines to end users' computers?

Unfortunately, Parallels Desktop does not support the direct deployment of virtual machines through Windows Autopilot for now due to several technical peculiarities.

Solution

We recommend deploying Windows 11 virtual machines to end-users computers using the Intune Provisioning package as outlined in [KB 129728](#) and Sysprep utility as outlined in [KB 129529](#).
