

## Label Management

- Parallels Secure Workspace

Labels in Parallels Secure Workspace serve different purposes.

There are different types of labels.

- **User Labels:** Assign applications, drives, or features to users or groups.
- **Server Labels:** Assign applications to application servers.
- **Labels:** Attaching a label to applications or drives allows you to use this label when filtering or querying in the System Settings or Dashboard.
- **Context Policy Labels:** Define context requirements for applications, drives, features, login, or the admin role.

Note: Creating labels can be done on the Manage > Labels page of the System Settings or it can also be created on the fly when configuring a resource.
