

How does profile management work with Parallels DaaS?

- Parallels DaaS

Parallels DaaS offers a hassle-free solution for managing user profiles. You can easily enable this feature in the admin portal, and the platform will create a file share in Microsoft Azure to store and manage the profiles. This simplifies the process of managing user profiles, providing a seamless experience for both the administrator and the end user.

For more information, check the Parallels DaaS – [Administrator's Guide](#)
