

Adding custom certificates to trusted in Linux

- Parallels Remote Application Server 20.0

Description

To add a certificate to a list of trusted certificates on RAS Linux client, you would need to create (or edit if it already exists) a separate, customtrusted.pem file

This file should be created in the following folders:

- For IGEL OS 12:
 - ◆ customtrusted.pem needs to be created in /userhome/.config/2X/Client/customtrusted.pem.
- For all other Linux distributions:
 - ◆ customtrusted.pem needs to be added in the same location as where trusted.pem currently exists.
 - ◆ By default this would be /opt/2x/client/share/trusted.pem
