How to take screenshots in macOS

• Parallels Desktop for Mac Standard Edition

If you want to take a screenshot in macOS, then follow the instructions below on how to do it.

Solution

Press **command**(?) + **Shift** + **3** keys simultaneously to take a screenshot of the whole screen.

Press command(?) + Shift + 4, and then drag the pointer to select the area for a screenshot.

The screenshots will be saved on your Desktop.

Please note that there are different <u>Mac keyboards</u>, so the buttons may differ. Sometimes **Shift** may look like an up arrow (), and the **command(?)** key might be named as **CMD(?)** instead.
