

How to create a Floppy drive Image

- Parallels Desktop
- Parallels Desktop for Mac Standard Edition

Resolution

1. Open Terminal and type

```
dd if=/dev/zero bs=1024 count=1440 > ~/Desktop/floppy.fdd
```

This will create an image file called *floppy.fdd* on your Mac's Desktop.

2. Open your Windows virtual machine's Configuration -> Hardware -> Floppy Disk.
3. From the "Source" drop-down menu select "Choose an image file..."

Navigate to the *floppy.fdd* file located on your Desktop, then click Open

The floppy disk image will be mounted to Windows as a Floppy disk.

4. Open the Floppy Disk Drive (A:) in Windows Explorer and format the disk.

5. Your floppy disk image is ready to use!
