

## How to give more hard disk space to a Windows virtual machine

- Parallels Desktop for Mac Standard Edition
- Parallels Desktop for Mac Pro Edition
- Parallels Desktop for Mac Business Edition
- Parallels Desktop for Mac App Store Edition

## **Symptoms**

I am running out of free space on my virtual machine (VM), and I want to increase the size of the virtual hard disk.

## Resolution

**Warning!** We strongly recommend that you <u>check your VM hard disk for errors</u> and <u>back up your VM</u> before following the steps below.

**Note:** This article does not apply to Boot Camp-based VMs, where the primary partition size cannot be increased as its size is predefined by Boot Camp Assistant.

In case you increased the size of the disk in the VM configuration, but Windows shows the same disk size, please refer to KB 123372.

Starting from version 14, Parallels Desktop® will periodically check free disk space left in the virtual hard disk and offer to increase (resize) hard disk via macOS® notifications.

## Increasing virtual hard disk size

- 1. Start Parallels Desktop and do not start your virtual machine. Shut it down if it is either suspended or running.
- 2. Click on the Parallels icon on Mac menu bar and select **Control Center**:

3. Right-click on your virtual machine and choose **Configure** to open its configuration.

4. <b>I</b>	For	<b>Parallels</b>	Deskton	17	and	above:
-------------	-----	------------------	---------	----	-----	--------

Go to the **Hardware** tab, select **Hard Disk** which requires increasing the size then click **Advanced...** > **Properties...** 

For Parallels Desktop	14 - Parallels Desktop 16:
Go to the <b>Hardware</b> ta <b>Settings</b> drop-down me	b, select <b>Hard Disk</b> which requires increasing the size then expand the <b>Advance</b> nu, then click <b>Properties</b> .
For earlier Parallels I	esktop versions (13 and below):

Go to the <b>Hardware</b> tab, select <b>Hard Disk</b> which requires increasing the size then click <b>Properties</b> .  5. If the VM has <b>Snapshots</b> the following notification window will appear. Press <b>Manage Snapshots</b> to open the corresponding dialogue window then remove <b>Snapshots</b> to start editing the disk size.
6. Choose the size you want for the virtual hard disk and click <b>Apply</b> .
7. After that <b>Parallels Desktop</b> will suggest creating a backup of the VM. To proceed further click <b>Continuo</b>
<b>Note:</b> as mentioned above, we strongly recommend creating a backup of the VM. In case of power
surges/failures with the Mac, Mac's unpredictable restarts or third-party applications interventions, during the operations with the virtual hard drive may result in its corruption result in the inability to use the virtual machine.
Checking the size of the disk in Windows
To make sure the changes were applied successfully, confirm that the size of the virtual hard disk has changed:

2. Right-click on the **Start** menu > **Disk Management** or click on the **Start** menu and type **Disk** 

1. Start the virtual machine.

Management

If the size of Hard Disk in the VM's configuration has changed and at the same time the size of the local disk (C:) in Windows has not, do the following:
<ol> <li>Repeat steps mentioned above to open <b>Disk Management</b>.</li> <li><b>Disk Management</b> will report that you now have an extra partition on the hard drive that's marked as Unallocated. You can add this Unallocated partition manually to your main disk (C:) partition:</li> </ol>

3. Right-click on the main (C:) partition and select <b>Extend Volume</b> .	
4 Extend Volume Wizerd will ones Click Next	
4. Extend Volume Wizard will open. Click <b>Next</b> .	

5. On the <b>Select Disk</b> page, you may choose how much extra space should be added to the main (C:) partition. By default, the whole <b>Unallocated partition</b> will be added. Click <b>Next</b> .
6. Click <b>Finish</b> on the next page, and the <b>Unallocated partition</b> will be added to the (C:) partition.

7. Click <b>Start</b> and type This/this and click on the suggested <b>This</b> PC Desktop app.
